

Dosing Recommendation

- Maintain the suggested GH/KH and Ca, Mg, K at water changes**
- Target 3 ppm N weekly if the tank is full of plants, dosing 1 ppm N 3x a week is recommended, Reduce the dose if algae occurs.**
- Target 0.1 ppm Fe from the Micro/Fe Solution weekly, its best to dose the Micros/Fe daily or 3-4x a week, smaller doses such as 0.025 ppm Fe daily would be a good start. weekly target dose of 0.1 ppm Fe is subject to change, depending on the plant response. Feel free to try higher doses such as 0.2-0.3 ppm Fe weekly**
- Try to dose the Macros and Micros few hours apart if you choose to dose them daily.**
- I would recomend making an Fe and Mn solution in their own bottle and keep the other Micros seperate if possible.**
